

# Day 7 JavaScript Assignment

Topics: var/let/const, Hoisting, Constructor Function, Async Programming, Promises, Fetch API

## Problem 1: Employee Directory API

### Business Scenario

HR dashboard using <https://jsonplaceholder.typicode.com/users>

### Requirements

- Fetch employees.
- Display cards.
- Create Employee constructor.
- Loading message.
- Promise catch().
- Explain hoisting in comments.

### Expected Output

Loading... -> Employee cards displayed

## Problem 2: Product Catalog

### Business Scenario

E-commerce using <https://fakestoreapi.com/products>

### Requirements

- Fetch products.
- Display cards.
- Create Product constructor.
- Loader.
- Error handling.
- Comments on var/let/const hoisting.

### Expected Output

Products displayed successfully

## Problem 3: Student Portal

### Business Scenario

LMS using jsonplaceholder users

### Requirements

- Fetch students.
- Constructor function.
- Display table.
- Search by name.
- Promise handling.

### Expected Output

Student table rendered

## Problem 4: Weather Dashboard

### Business Scenario

Weather UI using mock JSON or free API

### Requirements

- Fetch weather.
- Weather constructor.
- Loader.
- Display city/temp.
- Handle errors.

### Expected Output

Delhi 33°C Clear Sky

## Problem 5: Movie Explorer

### Business Scenario

Movie cards using jsonplaceholder photos

### Requirements

- Fetch first 20 records.
- Movie constructor.
- Display cards.
- Loader.
- Promise rejection handling.
- Hoisting examples in comments.

### Expected Output

20 movie cards displayed

### Submission

- Separate HTML/CSS/JS.
- Use Promises with Fetch API.
- Do not use async/await.
- GitHub submission with screenshots.
